Upon a	succe	ssful c	ompletic	on of th	e cour	se, the	studen	t will b	be able	to					
CO1		emonstrate elastic limit and stress-strain relationship using Hooke's law [L3]													
CO2		pply resonance to estimate the frequency of a tuning fork and examine the relation betwee								between					
		frequency and volume of a cavity. [L3]													
CO3		etermine the rigidity modulus, and Poisson's ratio of a material. [L3]													
CO4		xamine the type of semiconductor and evaluate the acceptance angle, numerical													
005		perture an optical fiber. [L4]													
CO5		stimate thermal conductivity of bad and good conductors. [L4] ummarize and tabulate the experimental observations and output.
