SIGNALS AND SYSTEMS

Course Code	23EE4501A	Year	III	Semester	I
Course Category	Professional Elective - I	Branch	EEE	Course Type	Theory
Credits	3	L-T-P	3-0-0	Prerequisites	Engineering Mathematics, ECA
Continuous Internal Evaluation:	30	Semester End Evaluation:	70	Total Marks:	100

Course Outcomes						
	Upon successful completion of the course, the student will be able to					
CO1	Understand different characteristics of signals and systems, correlations, sampling					
COI	theorem and various transforms. (L2)					
CO2 Apply various transforms to find the frequency response of continuous and discrete						
	(L3)					
CO3	Analyze continuous-time signals in frequency domain using Fourier series, Fourier transform, laplace transform and discrete time signals using Z transform. (L4)					
CO3	transform, laplace transform and discrete time signals using Z transform. (L4)					
CO4						
	Submit and prepare a report for basic signal Analysis, transformations, correlation and sampling					
	theorem.					

	Contribution of Course Outcomes towards achievement of Program Outcomes & Strength of correlations (3:High, 2: Medium, 1:Low)										es &			
	PO1	PO2	PO3	PO4	PO5						PO11		PSO1	PSO2
CO1														
CO2	3											2	3	2
CO3		3										2	3	2
CO4	3											2	3	2
CO5									3	3				

SYLLABUS				
Unit No.	Contents	Mapped CO		
Ι	INTRODUCTION: Definition of Signals and Systems, Classification of Signals, Classification of Systems, Operations on signals: time-shifting, time-scaling, amplitude-shifting, amplitude-scaling. Problems on classification and characteristics of Signals and Systems, Complex exponential and sinusoidal signals, Singularity functions and related functions: impulse function, step function signum function and ramp function.	CO1 CO5		
II	FOURIER SERIES AND FOURIER TRANSFORM: Fourier series representation of continuous time periodic signals, Dirichlet's conditions, Trigonometric Fourier series and Exponential Fourier series, Relation between Trigonometric and Exponential Fourier series, Complex Fourier spectrum. Deriving Fourier transform from Fourier series, Fourier	CO1 CO2 CO3 CO5		

	transform of standard signals, properties of Fourier transforms, Fourier transforms involving impulse function and Signum function. Related problems.	
III	CORRELATION: Auto-correlation and cross-correlation of functions, properties of correlation function, Energy density spectrum, Parseval's theorem, Power density spectrum, Relation between Convolution and correlation, Detection of periodic signals in the presence of noise by correlation. SAMPLING THEOREM: Graphical and analytical proof or Band Limited Signals, impulse sampling, Natural and Flat top Sampling, Reconstruction of signal from its samples,	CO1 CO4 CO5
IV	Aliasing, Related problems. LAPLACE TRANSFORMS: Introduction, Concept of region of convergence (ROC) for Laplace transforms, constraints on ROC for various classes of signals, Properties of L.T's, Inverse Laplace transform, Relation between L.T's, and F.T. of a signal. Laplace transform of certain signals using waveform synthesis.	CO1 CO2 CO3 CO5
V	Z–TRANSFORMS: Concept of Z-Transform of a discrete sequence. Region of convergence in Z- Transform, constraints on ROC for various classes of signals, Inverse Z-transform, properties of Z-transforms, Distinction between Laplace, Fourier and Z transforms.	CO1 CO2 CO3 CO5

Learning	Resources
----------	-----------

Text Books:

- 1. Signals, Systems & Communications-B.P.Lathi, BS Publications, 2003.
- 2. Signals and Systems-A.V. Oppenheim, A.S. Willsky and S.H. Nawab, PHI, 2nd Edn, 1997
- 3. Signals & Systems-Simon Haykin and VanVeen, Wiley, 2nd Edition, 2007

Reference Books:

- 1. Principles of Linear Systems and Signals-BP Lathi, Oxford University Press, 2015
- 2. Signals and Systems-TK Rawat, Oxford University press, 2011.
